Amsterdam, April, 2019

Dear colleague,

Hereby I do like to express on behalf of the Amsterdam University Medical Center, Department of Medical Microbiology, the wish that the BIOZEK COVID-19 IgG/IgM Rapid Test Cassette should remain available for large scale medical care in The Netherlands.

We recently extensively studied this diagnostic capacities of this test, and concluded the test to be of excellent quality. We can, if wanted, provide reports to underline this statement.

For clinical care with COVID 19 patients in hospitals, as well as measurements of the presence of specific antibodies in the Dutch population outside the hospital, we do regard this test as of vital importance.

We sincerely hope the BIOZEK Rapid Test remains available in The Netherlands.

With kind regards,

Dr. T. van Gool, MD, PhD
